## INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents P.O. Box 1450 Arlington, VA. 22313/1450

Sir:

In accordance with Applicant's duty of candor under 37 CFR §1.56 and in compliance with 37 CFR §1.97 and §1.98, Applicant is not aware of any material prior art but, in an abundance of caution and candor, Applicant submits the present Information Disclosure Statement and Form PTO-1449. The references cited herein are the same as those cited in the parent application, Serial No. 09/850,797.

JP 2000-24111 is not in the English language, therefore, included herewith is an English translation of same.

JP5052378 is also not in the English language. It is relevant because it discloses a device that's purpose is to obtain a pipe at a low manufacturing cost by a method in which the pipe is made of a belt-like tape, which is wound spirally with its side edge double, and at least a part of the double part of the tape is adhered, so that a peripheral wall of the pipe does not attached to each other when a number of pipes are bundled.

A pipe A is formed by winding a beltlike tape T spirally. The tape T is doubled at its side edge part 1, and a doubled part 2 is welded by heat to each other. As a thickness of the doubled part 2 is larger than that of the other part, a peripheral wall 3 of the pipe A expands outside at the double part 2. Accordingly, only by bundling a number of the pipes A with the peripheral walls 3 of the adjacent pipes A contacted with each other at the doubled parts 2 where a diameter is large, a prescribed space S can be procured between the peripheral walls 3

excluding the doubled part 2. If the pipe is employed in a humidifier of a heat exchanger, a humidifying area or a heat exchanging area can be obtained widely.

With regard to the one page printed from the Sympatex website (http://www.permapure.com/104.html) regarding the "Perma Pure Inc. New PDTM-series gas dryers", Applicant submits that this document discloses an in-line gas drying product for industrial applications. The Perma Pure dryer element is a bundle of 0.03 inch diameter Nafion tubes housed within a tubular housing. A dry purge gas passes through the housing counterflow to the sample flow through the Nafion tubes. Applicant admits that this page was publicly available at least as early as May 9, 2000. Therefore, consideration of this document is requested.

With regard to the one page printed from the Sympatex website (http://www.sympatex.com/1questions.html), Applicant submits that this document discloses a waterproof and breathable product for use with textiles for the clothing industry. Applicant admits that this page was publicly available at least as early as May 4, 2000. Therefore, consideration of this document is requested.

Also enclosed is a copy of a Communication in a corresponding European application.

This Information Disclosure Statement is being filed within three months of the filing date and before the receipt of the first Office Action on the merits and constitutes a bona fide attempt to comply with 37 CFR §1.97 and §1.98.

In accordance with 37 C.F.R. §1.97, the presentation of this information shall not be construed as a representation that no other material information as defined in 37 C.F.R. §1.56 exists, or as an admission that the information cited in this statement is, or is considered to be, material to patentability as defined in 37 C.F.R. §1.56.

Should the Examiner believe a fee is required, the United States Patent and Trademark Office is hereby authorized and requested to charge the fee to the deposit account of the undersigned firm, Account No. 20-1495.

Respectfully submitted,

Dated: 1415, 8003
